$$T_f = I \left(\frac{\Delta \omega}{\Delta t} \right) = T_f = I' \left(\frac{\Delta \omega}{\Delta t'} \right)$$

$$2I \left(\frac{\Delta \omega}{\Delta t'} \right) = I \left(\frac{\Delta \omega}{\Delta t} \right)$$

$$\Delta t' = 2 \Delta t \qquad (b)$$
